PLAN ◉ Systems

We are proud to formally introduce you to PLAN Systems.

The systemic failure of Big Tech communications systems during multiple national emergencies prove the necessity of a more robust information infrastructure for group forming networks and communities. Led by two U.S. Air Force and Navy veterans, we're developing software tools and instruments for multimedia distribution, group collaboration, experiential education, and archival knowledge. We aim to shape the technology landscape in a way that prioritizes privacy, data ownership, and accessibility over big tech dependency.

PLAN Systems is developing mission critical applications including: secure communications, file sharing, digital media broadcasting, and the ability to take your data with you anywhere. We cordially invite you to learn more about our innovative technology. If you are interested in supporting this important effort, there are few ways you can contribute:

$2.1m Capital Raise - A capital raise of $2.1M will move PLAN 3D into its next stage of development with a 24 month benchmark based roadmap. Funds will go to pay for software engineering and development operations resulting in a production ready PLAN 3D client.

Sponsor, Partner, and Developer Referrals - We have a multi-discipline team, and growing a wide network of supporters and partners. To start, we can provide custom implementations, full-stack application development, and technology that positions organizations for the coming spatial intranets. Sponsor organizations and partners are invited to work with us in developing these critical tools. Let's schedule a time to connect, and feel free to refer an organization or initiate a proposal here.

If PLAN is not a good fit for you personally, please consider connecting us with other's in your network to support the development of community-centric technology and digital privacy tools usable by non-technical people.

Please share this message with your friends and colleagues so we can fuel the development of peer-to-peer and collaborative systems that we own.

Warm Regards,

Brandon D. Wallace, President
Drew O'Meara, Chief Architect
